

GradeTrack — A Guided Tour

Time for the whole tour: about 90 minutes — Getting in 5 min · Student 20 min · Teacher 35 min · Admin 30 min. You'll be five different people, post an announcement, grade a surprise quiz, take today's attendance, build a brand-new class, and watch each of those changes land on someone else's screen.

1. Welcome & what this app is

GradeTrack is a small, tidy gradebook for a school. Teachers record scores for assignments, quizzes and exams, take attendance, and post notices to their class. Students see their own results — and only their own — as clear charts that show how they're trending. Behind it all, an admin keeps the school organised: who teaches what, who's enrolled where, and how the whole school is doing.

Three kinds of people use it. An **admin** creates classes and accounts, assigns teachers, enrolls students, and gets a school-wide dashboard. A **teacher** runs the classes they own: scores, attendance, announcements and a performance view of every student. A **student** sees a private picture of their own marks, attendance and progress in each class they're enrolled in.

2. Getting in

Open <http://localhost:5173> in your browser. You'll land on the sign-in page.

Every demo account uses the password **password123**.

Who	Email	Role	About them
Priya Menon	admin@gradetrack.dev	admin	Runs the school
Ananya Iyer	teacher1@gradetrack.dev	teacher	Teaches Algebra II
Rohan Deshmukh	teacher2@gradetrack.dev	teacher	Teaches Physics 101
Aarav Sharma	student1@gradetrack.dev	student	Algebra II — solid, a couple of absences
Diya Patel	student2@gradetrack.dev	student	Algebra II — perfect attendance, one quiz never handed in
Kabir Nair	student3@gradetrack.dev	student	Both classes — the star pupil (our main character)

Fiona Chen	student4@gradetrack.dev	student	Both classes — struggling and often absent
Ishaan Reddy	student5@gradetrack.dev	student	Physics 101 — top of that class
Hana Kim	student6@gradetrack.dev	student	Physics 101 — misses half the sessions
Ian Brooks	student7@gradetrack.dev	student	Left the school — his account is switched off

Signing in: type the email and password and click **Sign in** (the button stays grey until both boxes are filled). You go straight to the right home page for your role.

Signing out: click your name (next to the round badge with your initials) at the top right, then **Log out**. You're back at the sign-in page.

Switching accounts: log out, then sign in as someone else. That's it — there's no account switcher, and there doesn't need to be.

Tip — be two people at once. The best moments in this tour are when you change something as a teacher and then *see it appear* on a student's screen. To do that, keep the student signed in in your normal browser window and open a **private / incognito window** for the teacher (Ctrl+Shift+N in Chrome or Edge, Ctrl+Shift+P in Firefox). Each window keeps its own login. When the tour says "switch to Kabir's window and reload", that's what it means — the app doesn't refresh on its own, so press F5 to fetch the latest data.

3. The grand tour

Chapter 1 — Being a student (Kabir) · about 20 minutes

Students have the simplest view, so we start here. You'll first create an account of your own to see what a brand-new student sees, then sign in as Kabir, who's in both classes and has lots of data to look at.

1. Create your own student account. On the sign-in page, click **Create one** under "No account?". Fill in:

- Full name: `Neha Verma`
- Email: `neha@example.com`
- Roll number: `R2001`
- Password: `welcome123`

Click **Create account**. You're bounced back to the sign-in page with a green "Account created — sign in to continue." banner. Notice the small print: teachers and admins can't sign themselves up — only an administrator can create those.

2. See the empty nest. Sign in as `neha@example.com / welcome123`. Your home page says **"Not enrolled in any classes yet"** — a new student sees nothing until a teacher or admin puts them in a class. (Keep this account in mind: Priya will enrol Neha later, and you'll come back to see the difference.) Click your name at the top right and **Log out**.

3. Try the wrong password, on purpose. Sign in as `student3@gradetrack.dev` with the password `wrong`. A red "invalid email or password" banner appears and nothing else happens. Now sign in properly with `password123`. (Don't hammer the button — more than five tries in a minute and the app politely asks you to wait; see [Things worth noticing](#).)

4. Meet your home page. You're Kabir. The heading says **Your classes**, and the chip in the top bar says **student**. Two coloured cards sit at the top: **Algebra II** (green band, Mathematics) and **Physics 101** (purple band, Physics). Each card carries two numbers along the bottom — for Algebra II, **95% average** and **80% attendance**; for Physics 101, **84%** and **100%**. Cards are the quickest way to see how you're doing everywhere at once.

5. Read "Across your classes". Below the cards is a chart comparing your classes side by side — one pair of bars per class: blue is your

average score, orange is your attendance. Hover a bar to see the exact numbers. (If you were in three or more classes with marks, this would draw as a radar "spider" shape instead; with two classes it stays as bars.)

6. Scroll through your class summaries. Under the chart there's one panel per class, each with a coloured dot matching its card. Look at the Algebra II panel:

- **Average 95%** with "5 marks" beneath it, and **Attendance 80%** with "8 of 10 sessions".
- A green **↑ 4.2% vs Term 1** pill under the **Term 2** label — your Term 2 average compared with Term 1. Green arrow up means you improved; a red arrow down would mean the opposite.
- The line "Your average: 95% · Class average: not shared with students". The app deliberately never shows a student how their classmates did.
- **Marks over time** — a line chart. Each dot is one mark as a percentage of its maximum, in the order they were recorded; the faint dashed line is your overall average. Hover a dot to see the assessment name and the raw score (for example "Midterm Exam — 90 / 100").
- **Attendance calendar** — one little square per recorded session, green for present, red for absent, with the day of the month printed inside. Hover a square for the full date. Top right of it, **3 session streak**: three sessions in a row present, counting back from the latest one.

7. Open the class. Click **Open class** on the Algebra II panel (or click the Algebra II card at the top — same place). This is the class's home. A green banner shows the name, subject and year, and underneath are four tabs: **Stream**, **Performance**, **Marks**, **Attendance**.

8. Stream. This is where your teacher's notices live, newest first. There are two posts from Ananya Iyer — one about Quiz 2 results, one reminding you about Assignment 3. Each shows her initials, her name, and how long ago it was posted ("4 days ago" style — hover the time for the exact date). Students can read but not post.

9. Performance. Click the **Performance** tab. This is the same summary

as your home page plus two extra charts at the bottom:

- **Term comparison** — bars for Term 1 and Term 2: blue is your overall average, orange is assignments, purple quizzes, teal exams. It tells you whether you're getting better and in what.
- **Your average by category** — one bar per kind of work. For Kabir: assignments, quizzes and exams are all in the 90s.

10. Marks. Click the **Marks** tab. **Your marks** lists every score — assessment name, a category chip, term, score out of the maximum, percentage, and the date it was recorded, newest first. Now play with the two filters in the corner:

- **Term** → choose **Term 1**. Only Assignment 1, Quiz 1 and Midterm Exam remain, and the subtitle updates to "3 shown · 0 missing".
- **Category** → choose **quiz**. Just Quiz 1. Choose **exam** → only the Midterm. Set both back to **All terms** and **All categories**.

11. Attendance. Click the **Attendance** tab. **Your attendance** shows the same calendar as the summary, and **Records** below it lists every session as a row with a green **present** or red **absent** chip — 10 sessions for Algebra II, newest first. You were absent on 25 August and 18 August.

12. Look at Physics too. Click the **GradeTrack** wordmark at the top left to go home, then click the **Physics 101** card. Same four tabs, purple banner. On **Attendance**, the calendar is all green — 6 of 6 sessions, a **6 session streak**. On **Marks**, notice five marks with Lab 1 and Lab 2 in the assignment category. On **Stream**, two posts from Rohan Deshmukh.

13. Change your password (and change it back). Click your name at the top right → **Change password**. Type `password123` as the current password, `kabir2026` as the new one, and again to confirm. Watch the inline hints: type fewer than 8 characters and it says "Too short"; make the confirmation differ and it says "Passwords do not match". Click **Save new password** — a little "Password changed" toast pops up at the bottom left and you're back home. Now do it again in reverse so the demo password still works: name → **Change password** → current `kabir2026`, new `password123`, confirm, **Save new password**. (Also try **Cancel** on that page once — it just takes you back.)

14. Bonus — see the other side of the coin. Log out and sign in as Fiona, `student4@gradetrack.dev / password123`. Her Algebra II card reads **37%** and **30%**, and in the panel below both hero numbers are painted **red**, with a red **AT RISK** badge in the corner. Her calendar is mostly red squares and her streak is 0. This is what the app looks like when someone needs help. Log out.

15. Park Kabir here. Sign back in as Kabir (`student3@gradetrack.dev / password123`) and leave this window on his home page. Open a **private/incognito window** for the next chapter — you'll be flicking back to this one to watch things change.

What a student cannot do. Notice there's no way to add or change a mark, take attendance, post to the stream, or see anyone else's numbers — no roster tab, no class average, no export button. A student's world is their own results, read-only. Everything that changes the data belongs to the teacher, and everything about who's in which class belongs to the admin.

Chapter 2 — Being a teacher (Ananya) · about 35 minutes

This is the fun chapter: you get to *do* things. In your private window, sign in as `teacher1@gradetrack.dev / password123`. You're Ananya Iyer, and you teach Algebra II.

1. Your classes. The chip in the top bar now says **teacher**. You have one card — **Algebra II** — showing your name, the year 2026-27 and **4 students** (Ian doesn't count; he's inactive). Click the card.

2. The class banner and five tabs. The banner reads "Mathematics · 2026-27 · Ananya Iyer · 4 students". Teachers get a fifth tab, **Roster**, after Stream, Performance, Marks and Attendance.

3. Stream — post an announcement. You start on **Stream**. Above the two existing posts there's a compose box, **Announce something to your class**. Type:

Surprise quiz tomorrow on quadratics — 10 marks, 15 minutes. Bring a pencil.

The counter under the box ticks up ("78 / 2000"). Click **Post**. Your note appears at the top of the stream, timestamped "just now", and a toast confirms "Announcement posted".

Watch it ripple #1. Switch to Kabir's window, click the **Algebra II** card, and look at **Stream**. There's your surprise-quiz notice at the top of his feed. Come back to Ananya's window.

4. Delete a post. Each post has a small **Delete** link on the right. Click it on the *older* of the two seeded posts ("Welcome back! Quiz 2 results are posted...") — it turns into a red **Delete** button and a **Cancel**. Click **Cancel** first, just to see it back away. Then click **Delete** again and confirm with the red **Delete**. The post vanishes; the subtitle now says "2 announcements".

5. Performance — the class at a glance. Click **Performance**. Read it top to bottom:

- **Average score by student** — horizontal bars sorted best to worst: Kabir, Diya, Aarav, Fiona. Fiona's bar is red and sits left of the dashed line at 40%, the at-risk threshold.
- **Attendance vs average** — a scatter plot, one dot per student. Further right means better attendance; higher up means better marks. Two dashed red lines mark the thresholds (75% attendance, 40% average). Anyone below or left of a line turns red — that's Fiona, alone in the bottom left. Hover any dot for the name.
- **Trends** — a tiny sparkline per student showing their marks over time, most recent on the right, with their average beside it. Fiona's is drawn in red.
- **Terms** — grouped bars comparing the class's Term 1 and Term 2 averages, overall and per category.
- **Students** — the table. Fiona's row is tinted pink with a red **AT RISK** badge; the counter above says **1 student at risk**. Ian Brooks appears in grey italics as "(inactive)" with a neutral chip — his history is kept, but he's not counted. Diya and Fiona each show a red **1** in the Missing column (a quiz and an assignment never handed in).

Click **Export CSV** next to the counter. A file called "Algebra II

performance.csv" downloads — the same table, ready for a spreadsheet.

6. Marks — grade the surprise quiz. Click **Marks**. The top panel is **Enter scores**. Click **+ New assessment** and fill in:

- New assessment title: `Surprise Quiz`
- Category: **quiz**
- Term: `Term 2`
- Out of: `10`

The moment the form is complete, a scoring list appears with one box per active student ("0 of 4 scored · out of 10"). Type:

- Aarav Sharma: `7`
- Diya Patel: `8`
- Kabir Nair: `9`
- Fiona Chen: leave **blank** (she was away — blank means "missing", which is different from zero)

Before saving, try two things. Type `wrong` in the **Find student** box — the list empties with "No students match", then clear it. And type `12` in Aarav's box: a red "> 10" appears, the save button greys out, and a message says nothing is saved until every score is valid. Put it back to `7`.

Click **Save all 4 scores**. Toast: "Saved 3 scores (1 missing)". The form switches to the picker with **Surprise Quiz · quiz · Term 2 · /10** selected — from now on it's just another assessment.

Watch it ripple #2. Switch to Kabir's window, click the **GradeTrack** wordmark to go home, and reload. His Algebra II card now reads **94.17%** average (it was 95% — a 9/10 pulled it down a touch), "6 marks", the Term 2 pill has shrunk to **↑ 1.7% vs Term 1**, and the **Marks over time** line has a new dot on the far right. Open Algebra II → **Marks** and the Surprise Quiz sits at the top, recorded today. Back to Ananya.

7. Re-enter scores for an existing assessment. In **Enter scores**, pick **Quiz 1 · quiz · Term 1 · /10** from the **Assessment** dropdown. The boxes fill with the existing scores — Diya's is blank because hers is missing.

Type 6 for Diya and click **Save all 4 scores**. Toast: "Saved 4 scores (0 missing)". Diya's missing count on the Performance tab just dropped to 0.

8. Score distribution. The next panel, **Score distribution**, draws a histogram for one assessment: five buckets of percentage (0–39, 40–59, 60–74, 75–89, 90–100) with the number of students in each, and a dashed line labelled with the class mean. Pick **Midterm Exam · Term 1** in the **Assessment** dropdown: four students spread across four different buckets, mean 71.25%. Then pick **Surprise Quiz · Term 2**: three scored, one missing.

9. All marks — filter, edit, delete, export. The bottom panel lists every mark in the class, newest first. Use the corner filters: **Term** → **Term 2**, **Category** → **quiz**; you get Quiz 2 and Surprise Quiz only. Reset both to "All".

Find Aarav's **Surprise Quiz** row and click **Edit**. The score becomes a box; clear it and the percentage cell shows "—". Click **Save** — toast "Marked as missing", and the cell becomes a red **missing** chip. Click **Edit** again, type 7, **Save** — "Score updated". (Type 11 while editing and you'll see "Must be 0–10" with Save disabled; **Cancel** backs out without saving.)

Now Fiona's **Surprise Quiz** row (the missing one): click **Delete**. It asks "Delete this mark?" — click **Cancel** once, then **Delete** → red **Delete**. Toast "Mark deleted"; her row for that quiz is gone entirely.

Finally click **Export CSV** in the corner of All marks. Because both filters are on "All", the file is "Algebra II marks.csv"; if you'd left a filter on, its name would be in the file name.

10. Attendance — take today's register. Click **Attendance**.

- **Attendance trend** at the top is a line of the class's percentage present on each session date. Hover a point: "4 of 5 students" style detail. (25 August is the dip, at 50% — Kabir and Fiona both away.)
- **Take attendance** is the working form. The **Session date** is already today. Every student is ticked present by default. Untick **Fiona Chen**; the counter reads "3 of 4 present". Try the two quick

buttons: **Mark all absent** (0 of 4) and **Mark all present** (4 of 4), then untick Fiona again. Click **Save attendance**. Toast: "Saved attendance for — 3 of 4 present".

- Change the date to **2026-08-20** — the subtitle now warns "This date is already recorded — saving will overwrite it", and the ticks preload from that day (Aarav and Fiona were absent). Don't save; just set the date back to today. Try picking a date in the future: the field goes red with "Attendance cannot be recorded for a future date" and the save button locks.

Watch it ripple #3. Switch to Kabir's window, reload, and look at the Algebra II panel. His attendance now reads **81.82%** ("9 of 11 sessions"), the calendar has a new green square labelled **1**, and the streak is **4**. Back to Ananya.

11. Monthly register. Below the form, **Monthly register** shows a grid: one row per student, one column per session date (just the day number — hover a heading for the full date), ✓ for present, ✗ for absent, – for not recorded, with a Present count and % per student and a "Present / total" row along the bottom. The **Month** dropdown offers both **September 2026** (your new session — a single column) and **August 2026** (ten columns); look at each. In August, Ian Brooks appears as "(inactive)" with dashes after the first week — he was gone. With August showing, click **Export CSV** to download "Algebra II register 2026-08.csv".

12. Recorded sessions. The last panel lists every date with present/absent counts and a percentage — today's row is at the top with 3 present, 1 absent, 75%.

13. Roster. Click **Roster. Students** lists the four active students with email and a green **active** chip; the subtitle says "4 active · 1 inactive". Tick **Show inactive** to reveal Ian Brooks in grey with an **inactive** chip; untick it. Type **di** in the **Find** box — only Diya remains (it matches names and emails). Clear it. Notice there's nothing to click on a row: enrolling and removing students is the admin's job.

14. Peek at the other teacher. Log out and sign in as Rohan, `teacher2@gradetrack.dev / password123`. His only card is **Physics 101** with 4 students. Open it → **Performance**: Fiona and Hana

are both at risk ("2 students at risk") — Fiona for marks *and* attendance, Hana for attendance only (50%). Open **Roster**: no "Show inactive" toggle, because nobody in this class is inactive. Leave Rohan signed in here; Chapter 3 will send someone to him.

What a teacher cannot do. A teacher can only ever see the classes assigned to them — Ananya can't open Physics 101, and if she typed its address in she'd get a "forbidden" message and a link back. She can't create a class, add or remove students, or hand a class to another teacher; those are Priya's tools. And notice that grading, attendance and posting are limited to the *owning* teacher — even the admin can't do those.

Chapter 3 — Being the admin (Priya) · about 30 minutes

The control room. In your private window (log Rohan out first), sign in as `admin@gradetrack.dev / password123`.

1. School overview. Your home page has two tabs, **Overview** and **Manage**, and starts on Overview. Six stat cards run across the top:

- **Students** — 8, "7 active" (the seven seeded plus Neha, minus Ian).
- **Teachers** — 2.
- **Classes** — 2.
- **School average** — low 70s (it was 74.33% before your quiz nudged it), "mean of student averages".
- **Attendance** — low 70s, "sessions present".
- **At risk** — 2, painted red because it isn't zero (Fiona and Hana).

Below: **Classes at a glance** (blue bar = average, orange = attendance, one row per class, best first — hover for the teacher and headcount) and **Teacher load** (classes and total students per teacher). Then **All classes** as cards, each with the teacher's name and student count. Click the **Physics 101** card.

2. A class through admin eyes. The banner reads "Physics · 2026-27 · Rohan Deshmukh · 4 students". You get all five tabs, but look at what's

missing: **Stream** has no compose box (the Delete links are gone too), **Marks** has no Enter-scores panel and no Edit/Delete on rows (the score distribution and both Export CSV buttons are there), and **Attendance** has no Take-attendance form. The admin sees everything and grades nothing.

3. Enrol a student. Click **Roster**. Admins get an **Enrol a student** panel at the top. Open the **Student** dropdown — it lists only active students who aren't already in this class: Aarav, Diya and Neha (with roll numbers and emails). Pick **Neha Verma (R2001)** and click **Enrol**. Toast "Enrolled Neha Verma"; the Students table gains a row and the banner says 5 students.

4. Remove a student. On Neha's row click **Remove** → "Remove from class?" → **Cancel** (nothing happens) → **Remove** → red **Remove**. Toast "Removed Neha Verma". Back to 4 students. (Marks and attendance would survive a removal, but Neha has none.)

5. Manage — create a class. Click the **GradeTrack** wordmark, then the **Manage** tab. The first panel is **Classes**. Fill in the form:

- Class name: `Chemistry 101`
- Subject: `Chemistry`
- Academic year: leave `2026-27`
- Teacher: **Ananya Iyer**

Click **Create class**. Toast "Created Chemistry 101". The table underneath now has three rows; the new class has ID 3 and 0 students.

6. Reassign a class. Each row's **Teacher** column is a dropdown. On the Chemistry 101 row, pick **Rohan Deshmukh** — toast "Reassigned Chemistry 101" — then pick **Ananya Iyer** to give it back. That's the whole of class editing: name, subject and year are fixed once created (see [Rough edges](#)).

7. Enrol Kabir and Neha in the new class. Go back to **Overview**, scroll to All classes, and click the new **Chemistry 101** card — it has a **teal** band, because every class gets the next colour from a fixed palette. Open **Roster** → **Enrol a student** → **Kabir Nair (R1003)** → **Enrol**. Then **Neha Verma (R2001)** → **Enrol**. Two students. Wander the other tabs: every one is an empty state — "Nothing posted yet", "No marks yet", "No

assessments yet", "No attendance recorded yet", "Not enough data yet" on every chart. This is what a fresh class looks like before a teacher touches it.

Watch it ripple #4. Switch to Kabir's window, go home and reload. A third card, teal **Chemistry 101**, sits beside the other two with "—" for both numbers, and a new panel at the bottom shows dashes and "Not enough data yet" charts. Now log Kabir out and sign in as Neha (`neha@example.com / welcome123`): the "Not enrolled in any classes yet" message is gone and she has her first card. Sign Neha out and sign Kabir back in. Return to Priya.

8. The Users panel. Back on **Manage**, scroll to **Users**: every account with ID, name, email, roll number, a role chip, an **Active** switch, creation date and a **Reset password** link. Play with the three corner filters:

- **Search** → type `nair`. Only Kabir remains (it matches name, email or roll number — try `R1006` for Hana). Clear it.
- **Role** → **Teacher**: Ananya and Rohan. Back to **All roles**.
- **Status** → **Inactive**: just Ian Brooks, in grey italics. Back to **All**.

Notice your own row (Priya): the Active switch is greyed out — you can't lock yourself out.

9. Deactivate someone — and see the locks close. Find **Hana Kim** and flip her **Active** switch off. Toast "Deactivated Hana Kim"; her name goes grey with "(inactive)".

Watch it ripple #5. In *any* window, sign out and try signing in as `student6@gradetrack.dev / password123`. You get "account deactivated". Now sign in as Rohan (`teacher2@gradetrack.dev`), open **Physics 101** → **Roster**: the subtitle reads "3 active · 1 inactive" and the **Show inactive** toggle has appeared; tick it to see Hana greyed out. On **Performance** her row shows an **inactive** chip instead of AT RISK, the at-risk counter drops to **1**, and on **Marks** she's labelled "Hana Kim (inactive)". Her history is all still there. Sign out and return to Priya's window.

Flip Hana's switch back **on**. Toast "Reactivated Hana Kim".

10. Reset a password — and walk through the forced change. On

Hana's row click **Reset password**. A blue banner appears: "Temporary password for Hana Kim: **xxxxxxxxxxxx** — share it privately; they must change it at next sign-in". Copy the 12-character password. Now type `hana` in the **Search** box: the list refreshes and a grey **temp password** chip sits beside her name.

Watch it ripple #6. In your other window, sign out and sign in as `student6@gradetrack.dev` with the temporary password. Instead of her home page, Hana lands on **Set a new password** with a notice that she can't use the rest of GradeTrack until it's replaced (try clicking the GradeTrack wordmark — it brings you straight back). Enter the temporary password, then `password123` as the new one, confirm, and **Save new password**. She's through to her home page. Back in Priya's window, clear the Search box and type `hana` again — the temp-password chip is gone. Sign Kabir back in over there.

Click **Dismiss** on the banner and clear the Search box.

11. Create a teacher. Scroll to **Create a user**. Fill in:

- Full name: `Meera Joshi`
- Email: `meera@gradetrack.dev`
- Role: **Teacher**
- Phone: `555-0103`

(Switch the Role to **Student** for a second and a **Roll no** box appears; switch back to Teacher and it disappears.) Click **Create user**. A green banner shows the new account and its temporary password — copy it, then **Dismiss**. Type `meera` in the Users **Search** box to see her row, complete with a **temp password** chip (clear the box afterwards). The Teachers stat on Overview will now read 3.

12. Give Meera a class and log in as her. In the **Classes** table, change **Chemistry 101**'s teacher to **Meera Joshi**. Then, in your other window, sign out and sign in as `meera@gradetrack.dev` with her temporary password. Same **Set a new password** screen — set it to `meera2026` (this page also has a **Log out** button in place of Cancel, for the forced case). Her home page shows a single teal **Chemistry 101** card with **2 students**. Open it → **Marks**: the Enter-scores panel opens straight into "New assessment" mode because there's nothing to pick yet. This is the seat a new teacher starts from. Sign her out and sign

Kabir back in. Back to Priya.

13. Import students from a CSV. The last panel on Manage is **Import students from CSV**. Make a small file to feed it: open Notepad (or any text editor), paste the lines below, and save it as `students.csv`.

```
name,email,roll_no
Arjun Mehta,arjun@example.com,R2002
Sara Khan,sara@example.com,R2003
Aarav Sharma,student1@gradetrack.dev,R9999
No Email,,R2004
```

Click the **CSV file** box, choose the file, and a preview table appears — four rows, with a red **missing** chip on the blank email. The button now reads **Import 4 rows**; click it. The results table shows each row's fate: two **created**, one **duplicate email** (Aarav already exists), one **invalid**. Above it, a banner gives the **one shared temporary password** for everyone created. Toast "Imported 2 students". Search the Users list for `example.com` to see Arjun and Sara sitting there with temp-password chips; on Overview, Students now reads 10.

14. Change your own password — then put it back. Same as Kabir did: name → **Change password** → current `password123`, new `priya2026`, confirm, **Save new password**. Then reverse it so the demo login still works.

15. One last look at Overview. Click **Overview**. Students 10 (9 active), Teachers 3, Classes 3. Teacher load now shows Meera with 1 class and 2 students. Chemistry 101 doesn't appear in "Classes at a glance" yet — that chart waits until a class has marks or attendance.

What an admin cannot do. Priya can see every class and every number, but she can't grade, take attendance or post an announcement — those belong to the class's own teacher, and the admin screens simply don't offer them. She also can't switch off her own account. And while she can create accounts, the temporary passwords she hands out are one-time: each person must choose their own at first sign-in.

4. Things worth noticing

- **What "at risk" means.** A student is at risk when their average is under **40%** or their attendance is under **75%** in a class. It shows up everywhere at once: red bars and dots on the charts, a red sparkline, a pink table row with an **AT RISK** badge, red hero numbers on the student's own page, and the red **At risk** stat card on the admin overview. Inactive students are never counted.
- **Missing is not zero.** A blank score is recorded as **missing** (a red chip) and is left out of averages entirely; a 0 is a real score and drags the average down. The Performance table counts missing marks separately.
- **Card colours.** A class's colour is picked from a fixed seven-colour palette (blue, green, purple, teal, orange, brown, pink) by its position, so it never changes: Algebra II is always green, Physics 101 purple, your third class teal, a fourth orange. Red is deliberately kept out of the palette — it only ever means "absent" or "at risk".
- **Streaks.** The number beside the attendance calendar counts consecutive sessions present, back from the most recent one; one absence resets it to 0.
- **Term deltas.** The green/red pill under a term label only appears once a student has marks in two or more terms; it compares the latest term with the one before.
- **Radar vs bars.** "Across your classes" on the student home page draws a radar shape only when the student has averages in three or more classes; otherwise it draws bars, and it leaves out classes with no data at all.
- **Empty states everywhere.** A class with nothing in it says so plainly on every tab and chart ("Not enough data yet", "Nothing posted yet"), and the Enter-scores form opens in "new assessment" mode when there's nothing to pick.
- **Inactive people keep their history.** Deactivating a student hides them from rosters, counts and charts, but their marks and attendance stay visible with an "(inactive)" label, and a teacher can reveal them on the Roster tab with **Show inactive**. Deactivated accounts can't sign in ("account deactivated"), and an inactive student can't be enrolled anywhere.

- **Wrong passwords.** You get "invalid email or password" — the app never tells you which half was wrong. Five tries in a minute on one email and it says "too many attempts, try again shortly"; ten wrong tries in a row lock the account for 15 minutes even if you then get it right.
 - **Temporary passwords.** Anything an admin creates or resets starts with a random 12-character password that's shown exactly once, and the account is forced through **Set a new password** before it can go anywhere else. The Users list flags these with a **temp password** chip until it's done.
 - **Toasts.** Every save, delete and error shows a small message at the bottom left for a few seconds; there's a **Dismiss** on each if you're quicker than the timer.
 - **Two-step deletes.** Nothing is deleted on a single click — every Delete and Remove first turns into a red confirm button with a Cancel beside it.
 - **Overwriting attendance.** Picking a date that's already recorded preloads the ticks and warns that saving will overwrite it — that's how you correct a mistake.
 - **The date field won't go forward.** Attendance can only be taken for today or the past; a future date is refused on screen.
 - **CSV exports** are named after what you exported — "Algebra II marks Term 2 quiz.csv" if the filters were on — and open straight into a spreadsheet.
 - **Your session lasts eight hours.** After that (or if you clear your browser data) you'll be sent back to the sign-in page.
 - **Students never see each other.** No ranks, no class average, no names — the student view says "Class average: not shared with students" rather than pretending.
-

5. Full-coverage checklist

Tick your way to 100%.

Getting in & your account

- ☐ Created a student account with **Create one** / **Create account**

- ☐ Saw the "Account created — sign in to continue." banner
- ☐ Signed in with **Sign in**
- ☐ Saw "invalid email or password" on a wrong password
- ☐ Opened the account menu (your name, top right)
- ☐ Changed a password on **Change password** (and used **Cancel** once)
- ☐ Logged out with **Log out**
- ☐ Ran two accounts side by side in a private window

Student

- ☐ Saw "Not enrolled in any classes yet" as a brand-new student
- ☐ Read the class cards with average and attendance
- ☐ Read the **Across your classes** chart (bars — hover for numbers)
- ☐ Read a class summary: hero numbers, term delta pill, "Class average: not shared" line
- ☐ Read **Marks over time** (hovered a dot)
- ☐ Read the **Attendance calendar** and the session streak
- ☐ Used **Open class** from the home page
- ☐ Stream — read the teacher's posts and the "ago" timestamps
- ☐ Performance — **Term comparison** and **Your average by category**
- ☐ Marks — filtered by **Term** and by **Category**
- ☐ Attendance — the **Records** table with present/absent chips
- ☐ Went home via the **GradeTrack** wordmark and opened the second class
- ☐ Saw an at-risk student's own view (red numbers, **AT RISK** badge) as Fiona

Teacher

- ☐ Saw the teacher card with a student count
- ☐ Stream — **Post** an announcement (watched the character counter)
- ☐ Stream — **Delete** a post (used **Cancel** first, then confirmed)
- ☐ Performance — **Average score by student** with the 40% line
- ☐ Performance — **Attendance vs average** scatter with the threshold lines
- ☐ Performance — **Trends** sparklines

- ☐ Performance — **Terms** class comparison
- ☐ Performance — **Students** table with at-risk count, missing counts and an inactive row
- ☐ Performance — **Export CSV**
- ☐ Marks — created an assessment with **+ New assessment** and bulk-entered scores (**Save all N scores**)
- ☐ Marks — left a score blank to record a missing mark
- ☐ Marks — used **Find student** and saw an over-maximum score rejected
- ☐ Marks — picked an existing assessment (**Pick existing instead / Assessment** dropdown) and re-saved
- ☐ Marks — **Score distribution** histogram, switched assessment
- ☐ Marks — **All marks** filtered by **Term** and **Category**
- ☐ Marks — **Edit** a score (marked missing, then restored; saw "Must be 0–10"; used **Cancel**)
- ☐ Marks — **Delete** a mark (cancelled once, then confirmed)
- ☐ Marks — **Export CSV**
- ☐ Attendance — read the **Attendance trend** line
- ☐ Attendance — **Save attendance** for today with one student unticked
- ☐ Attendance — **Mark all present / Mark all absent**
- ☐ Attendance — picked an already-recorded date (overwrite warning) and a future date (refused)
- ☐ Attendance — **Monthly register**, switched **Month**, saw an inactive row, **Export CSV**
- ☐ Attendance — **Recorded sessions** table
- ☐ Roster — **Find** filter and **Show inactive** toggle
- ☐ Opened the other teacher's class as Rohan

Admin

- ☐ Overview — the six stat cards (Students, Teachers, Classes, School average, Attendance, At risk)
- ☐ Overview — **Classes at a glance** and **Teacher load** charts
- ☐ Overview — **All classes** cards with teacher names
- ☐ Viewed a class as admin (no compose, no score entry, no take-attendance)
- ☐ Roster — **Enrol a student / Enrol**
- ☐ Roster — **Remove** a student (cancelled once, then confirmed)
- ☐ Manage — **Create class**

- ☐ Manage — reassigned a class with the **Teacher** dropdown
 - ☐ Saw a brand-new class's empty states on every tab
 - ☐ Manage — Users **Search**, **Role** and **Status** filters
 - ☐ Manage — flipped an **Active** switch off and on
 - ☐ Saw "account deactivated" at sign-in and the inactive labels in the teacher's view
 - ☐ Manage — **Reset password** and read the temporary-password banner (**Dismiss**)
 - ☐ Walked through **Set a new password** as the reset user
 - ☐ Manage — **Create user** (teacher) and saw the temporary password
 - ☐ Signed in as the new teacher, set a password, saw her one-class home page
 - ☐ Manage — **Import students from CSV**: preview, **Import N rows**, per-row results (created / duplicate email / invalid)
-

6. Starting fresh

By now you've added a quiz, an announcement, a day of attendance, a class, a teacher, and a few students. To wipe your experiments and restore the original demo data, **log out of every browser window first** (a window still signed in as an account that no longer exists will show errors), then open a terminal in the project folder and run:

```
mysql -u root -p < schema.sql
mysql -u root -p < seed.sql
```

(Enter your MySQL password when asked, once per command. If you're in PowerShell, which doesn't accept <, use `Get-Content schema.sql | mysql -u root -p` and the same for `seed.sql`.)

The first command rebuilds every table empty; the second puts back the ten demo accounts, two classes, ten assessments, all the marks, attendance and announcements exactly as this guide describes them. Reload the browser, sign in, and you're at page one again.

7. Rough edges the tour avoids

None of these are broken paths — they're places where the app can't do something you might reach for, or does something slightly surprising. Listed so you know, not fixed.

- **No way to delete a class, rename a class, or edit/delete an assessment on screen.** The Manage table only lets you change a class's teacher, and a mistyped assessment title (say, "Surprise Quiz") stays in the dropdowns until you reset. The tour never makes a typo it can't undo.
- **Teachers can't enrol or remove students** from their Roster tab — it's read-only for them, even though the underlying system would allow it. The tour sends all enrolment through Priya.
- **Nothing refreshes by itself.** A change made in one window only shows up in another after a reload; the tour always says so.
- **The attendance date defaults from the universal clock.** Very early in the morning (before about 5:30 am in India) the **Session date** may default to yesterday — glance at it before saving.
- **The "Import ... rows" button reads "Import rows"** (with a gap) before a file is chosen — cosmetic.
- **A class with no data disappears from "Classes at a glance"** on the admin Overview and from the student's "Across your classes" chart, rather than showing as an empty bar; the tour points this out instead of hunting for it.
- **The Users table doesn't notice new accounts by itself.** After Create user, Import, or Reset password, the row (or its temp-password chip) only shows up once you type something in the Users **Search** box; the tour tells you to do exactly that.
- **The reset-password and create-user banners don't clear themselves** — you dismiss them by hand, and the create-user form clears while the banner stays.
